NP12 Winnebago NP12

Nicollet's time, some even within the recollection of Winnebago still living. All were unquestionably erected by the Winnebago, and since there is no reason for believing that this tribe entered Wisconsin many centuries before the first appearance of Europeans in America, it is quite erroneous to state, as Mr. Stout does, that the evidence at hand justifies us in dividing the occupancy of Wisconsin into two principal periods, the effigy mound-building era and the time that has elapsed since that period.

The use of copper by the Winnebago prior to their contact with Europeans is another of the rather baffling questions connected with Winnebago archeology. There are references to its use in the myth of the Twins, but the sections of the myth where it is mentioned show marked evidences of European influence and can hardly be accepted as reflecting the original mode of life of the Winnebago. Copper is found in a number of mounds, but we have no way of determining whether these mounds are pre-Columbian or not.

In all likelihood, almost all the copper found in Wisconsin comes from the original copper workings at Isle Royale, Keweenaw, Ontonagon, and elsewhere, in the Lake Superior district. "A provisional description of the territory in which the greatest number of such artifacts have been recovered up to the present time may be given as extending from about the middle of Milwaukee County, northward along the west shore of Lake Michigan to Door County, thence westward to the Wisconsin River or slightly beyond, thence southward along this stream to Dane County and eastward to Milwaukee County, the starting point. Embraced within this territory are the extensive lake shore village sites, from which thousands of articles have already been recovered, and certain well-known sites in Green Lake and adjoining counties, the Rush Lake and similarly productive regions."[1]

The region thus described embraces the Winnebago territory and that subsequently occupied by the Central Algonquian tribes. It does not follow the line of Winnebago migrations farther than the Wisconsin River to the west or farther than the southern boundary of Dane County to the south or southwest. As far as the writer knows no one has ever been able to obtain any information from the Winnebago that would in any manner connect them with the authorship of the copper implements found associated with their old village sites. All Indians questioned denied that their ancestors had ever used copper before the arrival of the early French traders. For the Winnebago, it seems to the writer, the problem connected with the occurrence of copper implements is not whether the Winnebago made them, but how they came to obtain them. The solution of this problem would be immensely facilitated if we had accurate knowledge
